

KARTHIK P

Penetration Tester | Cybersecurity Researcher

+91 8594069844 | Malappuram, Kerala, India | karthikparambil.github.io

SUMMARY

Results-driven Cybersecurity Penetration Tester and Ethical Hacker with hands-on expertise in network security, Active Directory exploitation, web application security, and vulnerability assessment. Experienced in identifying, exploiting, and reporting security weaknesses across Windows and Linux environments. Skilled in red team techniques, CTF machine development, and building vulnerable lab environments for security research and training.

EXPERIENCE

Security Researcher & R&D Member | *Offenso Hackers Academy, Calicut*

2025 – Present

- Worked as part of cybersecurity research and development team
- Designed and developed custom CTF machines and vulnerable lab environments for hands-on offensive security training.
- Researched real-world CVEs and mapped them to practical exploitation exercises across web, network, and Active Directory.
- Built internal security tools and automation scripts to streamline penetration testing workflows.

PROJECTS

Mission-Escape - Vulnerable VM • CTF

github.com/karthikparambil/Mission-Escape

Prison-break themed vulnerable linux VM with web exploitation and privilege escalation.

Mission-Space - Vulnerable VM • CTF

github.com/karthikparambil/Mission-Space

Custom vulnerable linux VM for enumeration, exploitation, and privilege escalation training.

DarkPatch - Vulnerable VM • Pentest Lab

Custom vulnerable VM with real-world vulnerabilities and public exploits for penetration testing practice.

scanix - Bash

github.com/karthikparambil/scanix

Automated reconnaissance suite covering host discovery, port scanning, service enumeration, and vulnerability fingerprinting to reduce manual recon.

pwnkit - Shell

github.com/karthikparambil/pwnkit

Collection of automation scripts covering exploitation, enumeration, and post-exploitation tasks built for real engagement efficiency.

lxd2root - Shell

github.com/karthikparambil/lxd2root

Privilege escalation exploit targeting LXD group misconfiguration on Linux systems, demonstrates critical risk of non-root lxd group membership.

CERTIFICATIONS

- Advanced Diploma in Information Security (ADIS)
- CompTIA Pentest+ (In Progress)

TECHNICAL SKILLS

Web Pentesting	OWASP Top 10 · SQL Injection · XSS · CSRF · SSRF · IDOR · JWT Attacks · File Upload Bypass · SSTI · NoSQL Injection
Network Pentesting	Host Discovery · Port Scanning · MITM · FTP/SMB/SSH Exploitation · Firewall Evasion · Packet Analysis · WPA2 Cracking
Active Directory	Kerberoasting · AS-REP Roasting · Pass-the-Hash · BloodHound · LDAP Enumeration · GPO Abuse
Scripting	Python · Bash
Tools	Nmap · Metasploit · BurpSuite · Wireshark · Hashcat · Hydra · SQLmap · Nikto · Nuclei · Nessus · Impacket · NetExec · Kerbrute · Mimikatz · Rubeus · Feroxbuster · FFUF · LinPeas · WinPeas

EDUCATION

Higher Secondary - Computer Science | IHRD Vazhakkad, Kerala

2023 – 2025
